

Database Schema

Open a terminal and navigate to your project directory `flight_booking/`.

Run the Flask shell to create the database:

```
flask shell
```

Inside the Flask shell, run the following commands to create the database tables:

```
from app import db
db.create_all()
```

Running the Application

After setting up everything:

1. Make sure you're in the `flight_booking/` directory.

Install the required packages:

```
pip install -r requirements.txt
```

Run the application:

```
python app.py
```

Open a browser and go to `http://127.0.0.1:5000/` to see the application in action.
